* Drinking Water (highlighted in bold blue) indicates human consumption. Non-drinking Water uses include livestock watering, gardening and any other non-human consumption water uses.

Misc. = Miscellaneous water use is not used for drinking.

Data highlighted in yellow are results for water sources located within the one-mile radius that were resampled during the two-mile radius sampling event.

* Drinking Water (highlighted in bold blue) indicates human consumption. Non-drinking Water uses include livestock watering, gardening and any other non-human consumption water uses.

ND = Not Detected at or above the limit of detection (LOD). The listed LOD is approximate and varies by instrument and over time.

NQ = Not Quantifiable. Detected at a concentration above the LOD and below the limit of quantification (LOQ).

* Drinking Water (highlighted in bold blue) indicates human consumption. Non-drinking Water uses include livestock watering, gardening and any other non-human consumption water uses.

ND = Not Detected at or above the limit of detection (LOD). The listed LOD is approximate and varies by instrument and over time.

NQ = Not Quantifiable. Detected at a concentration above the LOD and below the limit of quantification (LOQ).

J = estimated value (below laboratory quantification limit)

L = possible low bias result (relative to QA/QC)

B= compound detected in QC blank

R = unusable data result (relative to QA/QC)

Note: Analytical method changed as of November 2001.

*APFO is also known as C-8 or FC-143.

**Both APFO and PFOA are reported starting with analyses performed after December 1, 2004

***New person conducting sampling starting with 2Q05 event and incorrect sampling point was sampled.

*APFO is also known as C-8 or FC-143.

** These surface water locations were not sampled due to downed trees from an ice storm that prohibited access to the landfill.

***Both APFO and PFOA are reported starting with analyses performed after December 1, 2004

Samples were taken at the respective surface water locations.

However, due to an error by the courier, the samples arrived at the lab warm and were not analyzed.

‡ These sampling points could not be accessed due to a rock slide that had covered the sampling locations.

ND = Not Detected at or above the limit of detection (LOD).

The listed LOD is approximate and varies by instrument and over time.

NQ = Not Quantifiable. quantification (LOQ).

J = estimated value (below laboratory quantitation limit).

Note: Analytical method changed as of November 2001 (see Section 2.0 for details).

*APFO is also known as C-8 or FC-143

** Both APFO and PFOA are reported starting with analysis performed after December

*** No samples were collected for these wells because snow and ice
